

▶ StaR – STANDARD REPORTING ENGINE

*Fast and flexible full scale reporting system
implemented seamlessly into your environment*

TIME, COST AND QUALITY

StatFinn StaR will ensure that you will meet your timelines, cost effectively and without compromising quality.

StaR has been successfully implemented in production in different environments including Contract Research Organisations, Pharmaceutical companies and Research Institutes. To guarantee full audit trail from data to reports and to confirm our compliance in GxP and 21 CFR Part 11, StatFinn is operating StaR under version controlled and restricted environment.

DESIGN

The StaR consists of three modules powered by SAS software. These three modules are the heart of the system, but StaR is more than a reporting platform. StaR is a way of planning, reporting and validating your research results.

- ▶ **StaR engine** consist of output coordination platform which guides the output creation process. It also setups the environment and output layouts.
- ▶ **StaR output** generates each individual output according to the data type.
- ▶ **StaR Report** generates the report combining the individual outputs.

IMPLEMENTATION

StaR will be implemented into your environment within a couple of months. During the implementation your needs are evaluated and StaR will be modified to suit your environment. The implementation is validated and onsite training is ensuring that you and your team are familiar with StaR.

StaR documentation includes user manual and technical specifications. StatFinn will provide support and system updates and upgrades by request. The code of StaR including the engine core code is open and delivered to you during the installation.

ADVANTAGES

- ▶ Fast implementation and easy to use reporting system
- ▶ StaR is standardising routine and repeated tasks to give you more time to evaluate the results
- ▶ Standardized outputs and study coordination guarantees quality
- ▶ Modular system design allows updates and upgrades
- ▶ Flexibility of the system allows you to have your own outputs merged into the system
- ▶ Version control guarantees backward compatibility
- ▶ Open source code for your own on demand development of the system
- ▶ Better quality with less resource
